

TIPS BEACON

THE INDIAN PUBLIC SCHOOL, COIMBATORE

SPARK PLUG

With the relaxations of the government from lock down to reopen the schools it was already a fabulous start of February. Our tiny stars are back to school with complete enthusiasm to meet their friends, teachers and most importantly to experience the physical environment of the school. Physical classroom learning brings with it ,its share of advantages as children are exposed to real time learning .Children have access to everything from the way the materials are arranged and the visibility of theme board, word walls, teachers and their peers.

Considering all these aspects in a classroom, it ensures a positive physical environment where students can concentrate on their learning, without any distractions. The ambience of the classroom makes the children more inclined to focus and actively participate in all the classroom discussions.

Adhering to all the safety measure and protocols,our young learners are ready to take on the challenges of learning in different situations.

LEARNING CURVE

Sunshine is promising, rain is refreshing, wind braces us up, snow is exhilarating; there is really no such thing as bad weather, only different kinds of good weather. Nature is so powerful, so strong. Weather is the day-to-day state of the atmosphere, and its short-term variation in minutes to weeks. People generally think of weather as the combination of temperature, humidity, precipitation, cloudiness, visibility, and wind.

One of the first things many people do when they wake up in the morning is check the weather. The weather pattern where you live will help you and your parents decide what you should wear or bring to school that day. A weather pattern occurs when the weather stays the same for days or weeks at a time.

The patterns of weather are tied to the four seasons: summer, winter, spring, and fall. There are a few different weather patterns that you may already know about, such as hot and dry, wet and rainy, or cold. Children explored these amazing patterns using data chart.

PARENT CHRONICLES

Nurturing children in the early years is a partnership between parents and teachers, home and school. Much development happens in these early years as of the brain, of self-esteem and of learning habits, forming the foundation for cognitive development in the later years, life-long learning, building strong relationships and an outlook on life. Through these talks the vocabulary of the kids can be enriched.

Our Parent Ms. Sanjana (Sidvik's Mom) shared her views on different types of weather and narrated a story related to it. The kids were excited to learn new things from her. The students enjoyed a lot, as it was a break from their regular academics.

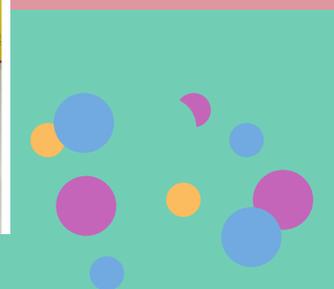

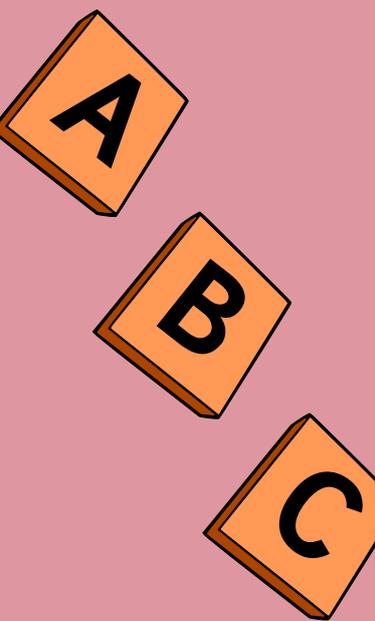

POCKET PHONICS

Our task towards the success of a child's reading is to help them climb their own mountains as high as possible. We facilitate them with the sounds and they make connections up by integrating their learning, Creativity and Knowledge.

Here is an activity that children did, something from classroom to pick their favourite grapheme and represent it's Phoneme. Each of them came out making it happen with their favourite puzzle, marbles and pictures of their favourite phoneme. And so our real success happens to grow as they wish.

HEALTH AND BEYOND

Good health is central to human happiness and well-being that contributes to prosperity and wealth of the individual. Health is a state of complete physical, mental, social and spiritual well being. For a healthy life cycle, we should follow a healthy and balanced diet, good hygiene habits, staying in a proper shelter and getting enough sleep. In addition, physical activities also play a vital role. As kids are mostly active throughout the day, good enrichment activities like dance will help them to stay fit despite the continuous academics happening all day long.

Learning, thinking, creativity, and intelligence just don't come from the brain alone, but from the entire body. Children need to move! Any activities to get kids moving on their feet is a must and it can be achieved through dancing. Dance burns calories, strengthens muscles, improves balance, increases flexibility, and gives the heart a good workout. Dance has also been proven to increase cognitive development. Current research says that for dancers the body and mind are connected in vital ways. Dancing allows the kids to express themselves. Our kids learn classical dance as a part of their education. The happiness and interest in learning a new form of art is visible in their faces.

BUDDING INFLUENCER

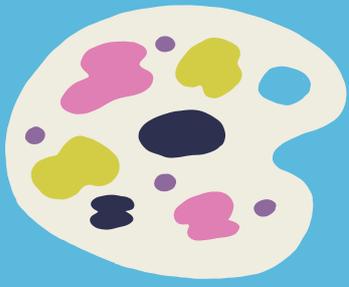

It's all about awareness!

Feb 4 is celebrated as the World Cancer Day. The children were asked to research the disease cancer and get a printout of some foods that fight against the disease. During the class the teacher explained the causes of the disease and its types. Students collected the real life vegetables, fruits and nuts from their home during the class.

Healthy lifestyle starts from the very beginning!

MAKE IT HAPPEN

POTPOURRI

The region's most favourite festival is here! Pongal, a celebration of happiness, harvest, sun and all things happy. It is a harvest celebration to thank the Sun God and higher yielding crops.

It is celebrated for four – day harvest festival dedicated to the Sun God. In online classes the children were traditionally dressed up. Thirukural competition was held for students. Language teacher explained about the importance of Pongal.

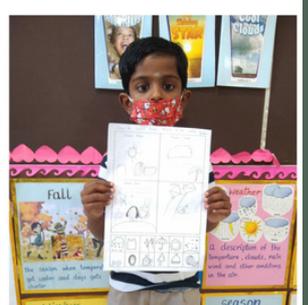

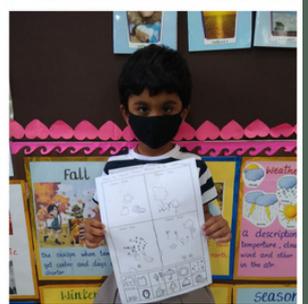

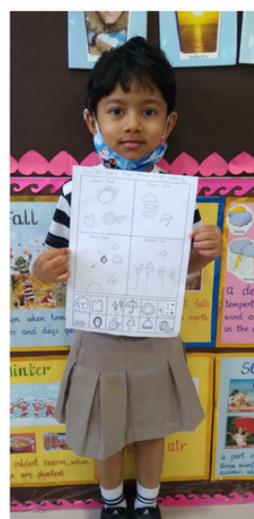

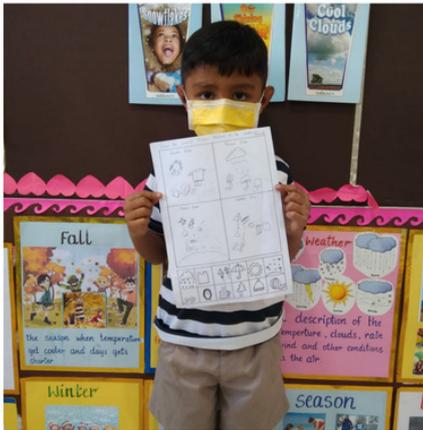

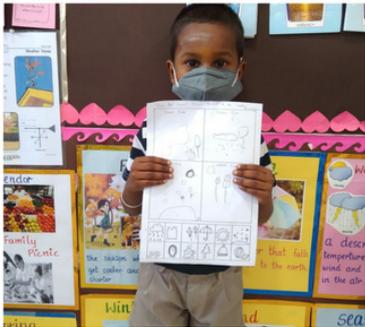

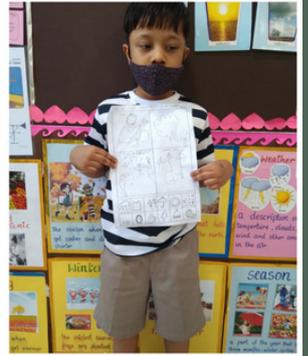

Pongol ooo pongal

Look out notice:

1. WORLD WILDLIFE DAY
2. WORLD SLEEP DAY
3. INTERNATIONAL DAY OF HAPPINESS
4. WOMEN'S DAY
